~\$1.5M

Inventory flow

*Major ATP Masters 1000
Tournament, 2025*

The Problem

At large-scale operations, managing inventory across dozens of outlets is a logistical nightmare.

Orders via calls & radio

Constant interruptions, miscommunication, and missed requests.

3-ply paper forms

Handwriting errors, lost forms, and zero audit trail.

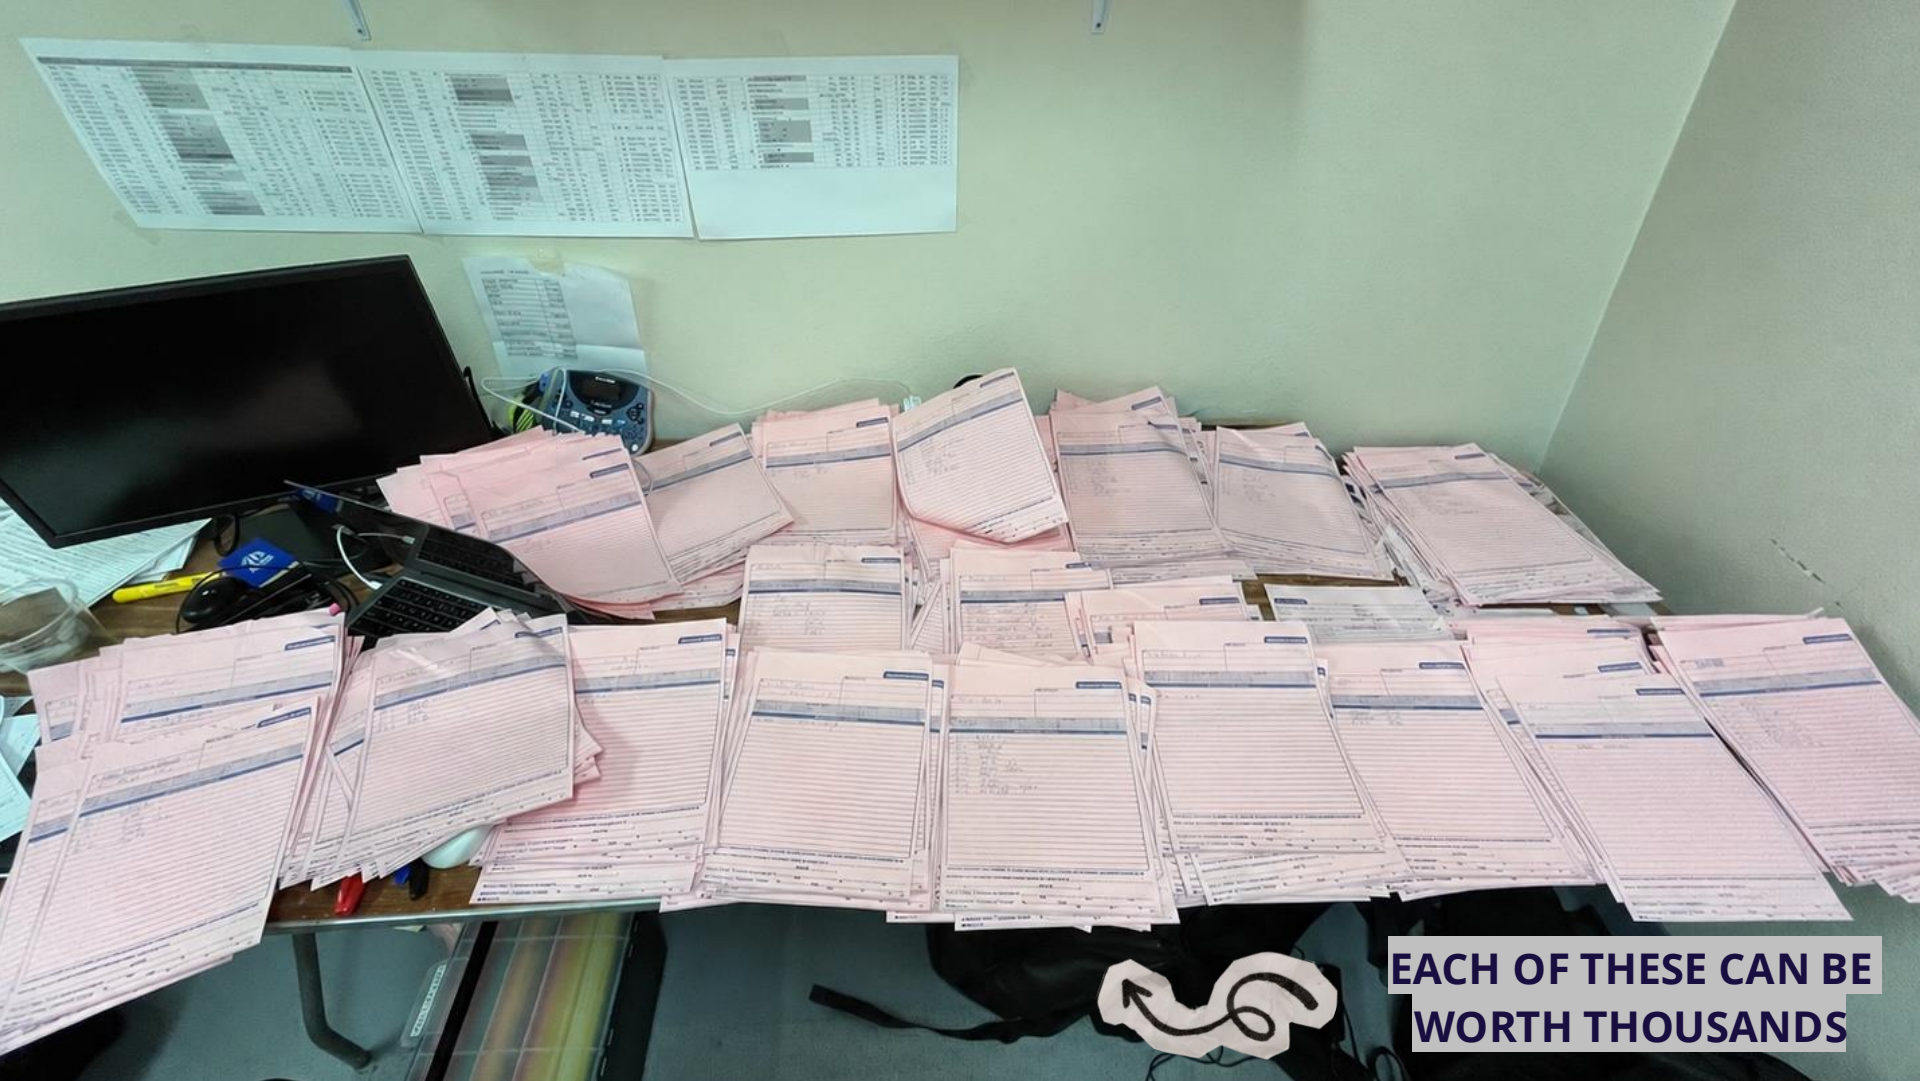

Manual Excel entry

Hours of post-event reconciliation, always after the damage is done.

Zero real-time visibility

No one knows what's in stock across locations — until something runs out.

**EACH OF THESE CAN BE
WORTH THOUSANDS**

The Solution

Viable closes the full cycle — from warehouse receiving to point-of-sale.

Inventory uploaded

Load your full inventory using your invoices.

Tracked fulfillment

Every order's journey — received, in transit, delivered.

Orders via phone

Staff place orders from any smartphone or designated terminals — no calls needed.

Auto inventory updates

Stock levels update the moment an order is confirmed.

Real-time notifications

Warehouse receives Instant alerts on new orders, low stock, and deliveries.

POS Integration

Connect your existing POS via API. Sales data flows back in real time — outlet inventory updates automatically and reorder alerts trigger before you run out.

Before & After Viable

BEFORE

- X Calls, texts & radio for every order
- X 3-ply paper forms with handwriting
- X Physical signatures required
- X Manual Excel data entry
- X No real-time stock visibility
- X Post-event reconciliation nightmares

VS

WITH VIABLE

- ✓ Orders placed on any smartphone
- ✓ Digital forms, no paper needed
- ✓ Digital audit trail, always on
- ✓ Inventory auto-updated in real time
- ✓ Live dashboard across all locations
- ✓ POS integration to close the full inventory loop

Proven at Scale

Deployed at the BNP Paribas Open — one of the world's premier tennis tournaments.

Cases tracked

500,000+

Units managed

62

Locations

~\$1.5M

Inventory flow

"Each paper form can represent thousands of dollars in inventory."

Validated across multi-day, multi-location beverage operations

How It Works

1

Load Inventory

Upload your product inventory via invoice. Set min stock levels and pricing per item.

2

Place Orders

Outlets order from their phone or designated terminals. No calls. No paper. Instant submission.

3

Fulfill & Track

Warehouse confirms receipt, marks in transit, delivers. Every step logged.

4

Analyze & Report

Full order history, consumption data, and financial summaries. Connect your POS to close the loop and trigger automatic reorders.

Works on any device. No hardware required. POS integration available to close the full cycle.

Who It's For

Any large-scale operation managing inventory across multiple points of sale.

Music Festivals

Multi-stage, multi-bar operations with high order volume.

Venues & Arenas

Permanent venues running recurring events.

Sporting Events

Stadiums and tournaments with distributed concession points.

Airports & Transport Terminals

High-end operations where accuracy is non-negotiable.

Food & Beverage

Catering companies managing multiple service areas.

Franchises & Retail Chains

Festivals and public events with distributed vendor management.

Let's Talk.
